1) The class loader in Java Play
a crucial role in the dynamic Play
of class into the Java Vira
machine, at runtime,
2) It is responsible for localis

Java class Files From Various
Sources, Such as the File sys
network, or other respositor
into memory as needed by h

3) Class loaders follows a hieron cal delegation. model, where the request to load a class to load the class itself.

Garbage collection -

Garbage collection in Java is the author

Process of reclaining memory occur

by object that are no longer

in use by the program.

Java's garbage collector periodic

identifiers and frees memory out
by unreachable object, therby
preventing memory leak and
ensuring efficient memory usay
